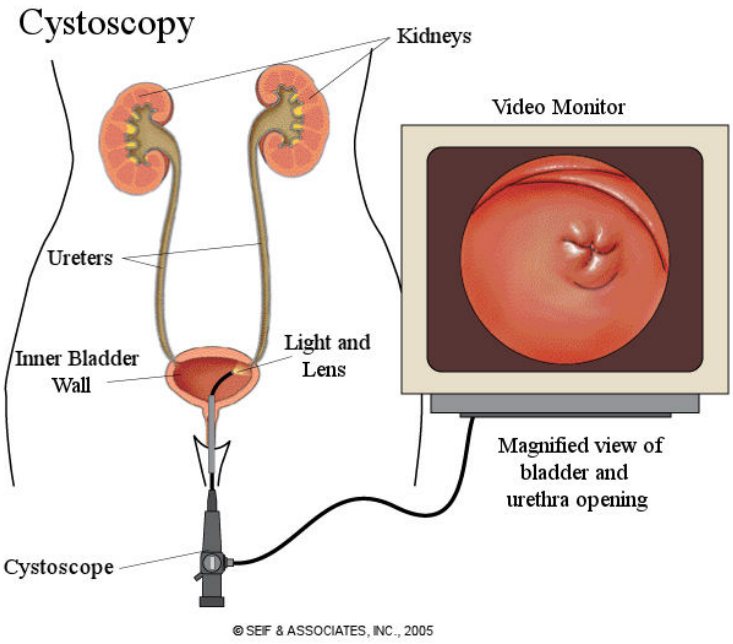
Cystoscopy (A Bladder Exam)
Care After Procedure

Refer to this sheet in the next few weeks. These discharge instructions provide you with general information on caring for yourself after you leave the hospital. Your caregiver may also give you specific instructions. Your treatment has been planned according to the most current medical practices available, but unavoidable complications sometimes occur. If you have any problems or questions after discharge, please call your caregiver.



AFTER THE PROCEDURE

- There may be temporary bleeding and burning with urination.
- Drink enough water and fluids to keep your urine clear or pale yellow.

FINDING OUT THE RESULTS OF YOUR TEST

Not all test results are available during your visit. If your test results are not back during the visit, make an appointment with your caregiver to find out the results. Do not assume everything is normal if you have not heard from your caregiver or the medical facility. It is important for you to follow up on all of your test results.

SEEK IMMEDIATE MEDICAL CARE IF:

- There is an increase in blood in the urine or you are passing clots.
- There is difficulty passing urine.
- You develop the chills.
- You have an oral temperature above 102° F (38.9° C), not controlled by medicine.
- Belly (*abdominal*) pain develops.
